

Surgical Treatment Addendum for
HYSTEROSCOPY WITH ANTICIPATED

BIOPSY OR CURETTAGE
MYOMECTOMY
LYSIS OF ADHESIONS/RESECTION OF
SEPTUM REMOVAL OF FOREIGN BODY

Complications and consequences have been discussed. I understand that the risks include, but are not limited to, the following:

- Pain (immediately afterwards, delayed, long term)
- Excessive bleeding, possibly requiring hysterectomy or blood transfusion (and its risks of infection or transfusion reaction)
- Surgical infection, infection of uterus
- Blunt trauma, thermal or electrical injury to abdominal/pelvic organs such as the uterus, bladder, ureters, bowel, blood vessels, nerves. This may require further surgery (such as laparoscopy, hysterectomy, or exploratory laparotomy to repair the uterus or the bowel), either right away or at a later date
- Failure to make a diagnosis or cure the problem
- Scarring inside the uterus causing fertility problems
- Electrolyte abnormality (salt imbalance)/pulmonary edema from fluid overload
- Inability to complete procedure
- Risks of anesthesia

I acknowledge that I have read and fully understand the above complications and risks, and that all of my questions have been answered to my satisfaction.
